A User's Guide to TEdit

XEROX

Objective

The objective of this user's guide is to show you how to use TEdit both by typing text to a window and by manipulating TEdit using the programmatic interface.

How to Use This Guide

New Users

If you have never used TEdit before read the first three chapters to orient yourself to TEdit at the basic level: opening the TEdit window and entering text. You will also want to read the first part of Chapter 4, The TEdit Menu which describes TEdit's menus and gives some general operating instructions for them. After reading those sections you can use this Guide more as a reference to TEdit; when you need to do some specific text manipulation, such as increasing the amount of white space between paragraphs, look in the chapter that deals with that topic. In this case the topic is manipulating text in paragraph-sized blocks so you would look in Chapter 6, Changing Paragraph Looks.

Programmers will find TEdit's programmatic interface (see Chapter 8, Programmer's Interface) useful for manipulating TEdit files from within programs. You will find all the TEdit functions contained in the programmer's interface listed in the index at the end of this manual.

Experienced Users

For experienced users, TEdit, the program, has not changed very much since the Koto release. You should consult the TEdit portion of the release notes to find out what new functionality TEdit has and what previously existing problems have been fixed. You will notice that the TEdit manual has been divided into functional chapters; a table of contents and index have been added to help you find the information you need.
